### DETAILED ACTION

### Response to Amendment

The rejection of claims 1, 2-3, 6-8, 13 & 14-15 under 35 U.S.C. 102(e) as being anticipated by Kaneko JP 633310574 is overcome. The rejection of claims 4-5, 9-10 & 12 under 35 U.S.C. 103(a) as being unpatentable over Kaneko JP 633310574 is overcome. The rejection of claims 11 & 16 under 35 U.S.C. 103(a) as being unpatentable over Kaneko JP 633310574 in view of Sridhar et al. U.S. Pub. 2005/0074650 is overcome.

# Allowable Subject Matter

Claims 1-16 & 26 are allowed. The prior art of record does not teach or suggest a first and second catalyst that promotes reforming and being dispersed within or upon the support structure such that the first catalyst has a first concentration at a first position and the second catalyst has a second concentration at a second position, wherein the first position is closer to the entrance than the second position and the first concentration is lowered than the second concentrations, and wherein the first and second catalyst are comprised of identical catalyst material.

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 25 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. With respect to claim 25, it is unclear as to how the first and second catalyst have the same carbon-deposition rate when the catalyst concentrations are different. According to claim 1, the first and second catalyst are made of identical materials however, the first concentration is lower than the second concentration. Therefore, it is unclear as to chow the carbon-deposition rates are the same, because the concentration variation would change the carbon-deposition rate.

#### Response to Arguments

Applicant's arguments, with respect to Kaneko JP 633310574 have been fully considered and are persuasive. The previous pending rejections have been withdrawn. However, newly added claim 25 raises enablement issues as recited in the rejection above.

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
